

## eBC eB eBG Miniature Circuit Breaker

### 1. General

#### 1.1 Function

protection of circuits against short-circuit currents,  
protection of circuits against overload currents,  
switch,  
isolation.

#### 1.2 Selection

Technical data of the network at the point considered:  
the earthing systems (TNS, TNC),  
short-circuit current at the circuit-breaker installation point,  
which must always be less than the breaking capacity of  
this device,

Network normal voltage.

Tripping curves:

#### B curve (3-5In)

protection for people and big length cables in TN and IT  
systems.

#### C curve (5-10In)

protection for resistive and inductive loads with low inrush  
current.

#### D curve(10-20In)

protection for circuits which supply loads with high inrush  
current at the circuit closing  
(LV/LV transformers, breakdown lamps).

#### 1.3 Approvals and certificates

Detailed information, please refer to Certificates Table  
on the last page.

## 2.3 Temperature derating

The maximum permissible current in a circuit breaker depends on the ambient temperature where the circuit breaker is placed. Ambient temperature is the temperature inside the enclosure or switchboard in which the circuit breakers are installed.

**The reference temperature is 30°C**
