

Infrared Thermometer

Description

Noncontact Thermometer detects the infrared ray that an object emits, The instrument foculizes infrared energy of the object onto a sensor through a lens, changes the surface temperature into electric signal, a microcomputer calculates and displays the measurement temperature on the LCD.

Unit: mm

Make sure that the target is larger than the meter's visual spot size. The smaller the target, the closer you should be to it. The relationship between distance and spot size is 10:1

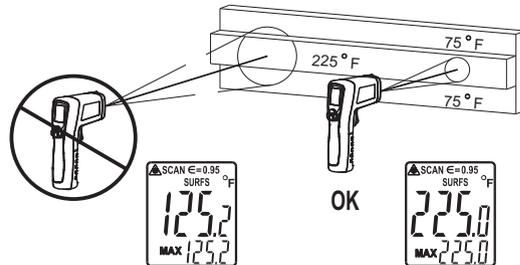

### Operating Thermometer

- To measure temperature, pull and hold trigger. Release the trigger to hold a temperature reading. The meter turns off when no activity is detected for ten seconds.
- Press **M** key to toggle between the MAX, MIN, AVG value.
- Press **L** key to Active the laser.
- Press **☀** key to light on or off the backlight.
- Press **°C/°F** key to switch between °C or °F.

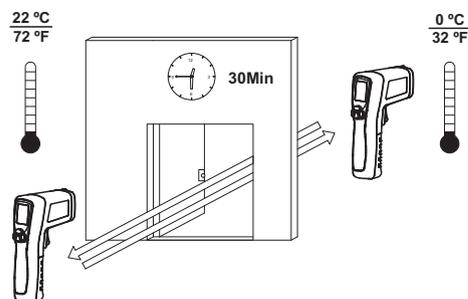

### Note1

Make sure that the target is larger than the meter's visual spot size

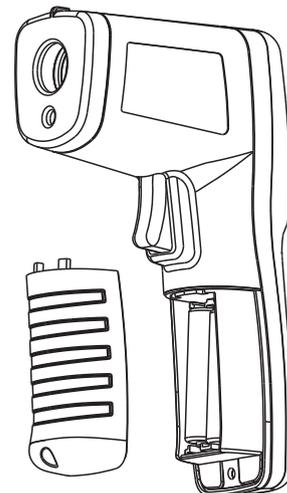

### Note2

When ambient temperature changes quickly, just wait 30 minutes to balance the temperature of the instrument before use.

### Note3

When the battery voltage is lower, the battery symbol appears, it indicates that we must change the battery.

### WARNING

Do not mix old and new batteries. Do not mix alkaline, standard (carbon-zinc), or rechargeable (ni-cad, ni-mh, etc) batteries.
